PROJECTS

Traffic Light Queue Simulation | GitHub

Mar - Apr 25

- Developed a C++ based traffic simulation system using custom linked lists and priority queues to manage lane wise vehicle flow and emergency prioritization.
- Built the frontend interface and Node.js middleware that connects the backend to enable smooth user input and real-time simulation display.
- Implemented dynamic signal timing, structured data handling, and clear output logic to replicate realistic intersection behavior efficiently.
- **Tech:** DSA, C++, VS Code

CineCritic AI Chatbot | GitHub

Jan - Feb 25

- Developed a domain-focused movie review chatbot offering structured, expert-level film analysis.
- Integrated sentiment evaluation, highlights, lowlights, and tailored recommendations to enhance user understanding.
- Implemented persistent chat context for smoother follow-up queries and improved interaction quality.
- Strengthened user engagement through clear, professional, and consistent review outputs.
- **Tech:** Python, Flask, VS Code

TRAINING

Mastering Data Structures and Algorithms - LPU CPE:

Jun - Jul 25

- **About:** Completed a structured skill development program focused on mastering advanced concepts of Data Structures and Algorithms. Gained hands-on experience in optimizing problem-solving techniques and improving algorithmic efficiency.
- **Skills covered:** Arrays, Linked Lists, Stacks, Queues, Trees, Graphs, Sorting & Searching, Algorithm Optimization
